Read problem statements in [Hindi](#) and [Mandarin Chinese](#).

An encoder encodes the **first 16 lowercase English letters** using 4 bits each. The first bit (from the left) of the code is 0 if the letter lies among the first 8 letters, else it is 1, signifying that it lies among the last 8 letters. The second bit of the code is 0 if the letter lies among the first 4 letters of those 8 letters found in the previous step, else it's 1, signifying that it lies among the last 4 letters of those 8 letters. Similarly, the third and the fourth bit each **signify the half in which the letter lies**.

For example, the letter *j* would be encoded as :

- Among $(a, b, c, d, e, f, g, h \mid i, j, k, l, m, n, o, p)$, *j* appears in the second half. So the first bit of its encoding is 1.
- Now, among $(i, j, k, l \mid m, n, o, p)$, *j* appears in the first half. So the second bit of its encoding is 0.
- Now, among $(i, j \mid k, l)$, *j* appears in the first half. So the third bit of its encoding is 0.
- Now, among $(i \mid j)$, *j* appears in the second half. So the fourth and last bit of its encoding is 1.

So *j*'s encoding is 1001.

Given a binary encoded string *S*, of length at most 10^5 , decode the string. That is, the first 4 bits are the encoding of the first letter of the secret message, the next 4 bits encode the second letter, and so on. It is guaranteed that the string's length is a multiple of 4.

Input:

- The first line of the input contains an integer *T*, denoting the number of test cases.
- The first line of each test case contains an integer *N*, the length of the encoded string.
- The second line of each test case contains the encoded string *S*.

Output:

For each test case, print the decoded string, in a separate line.

Constraints

- $1 \leq T \leq 10$
- $4 \leq N \leq 10^5$
- The length of the encoded string is a multiple of 4.
- $0 \leq S_i \leq 1$

Subtasks

- 100 points : Original constraints.

Sample Input:

```
3
4
0000
8
00001111
4
1001
```

Sample Output:

```
a
ap
j
```

Explanation:

- **Sample Case 1 :**

The first bit is 0, so the letter lies among the first 8 letters, i.e., among *a, b, c, d, e, f, g, h*. The second bit is 0, so it lies among the first four of these, i.e., among *a, b, c, d*.

The third bit is 0, so it again lies in the first half, i.e., it's either *a* or *b*. Finally, the fourth bit is also 0, so we know that the letter is *a*.

• **Sample Case 2 :**

Each four bits correspond to a character. Just like in sample case 1, 0000 is equivalent to *a*. Similarly, 1111 is equivalent to *p*. So, the decoded string is *ap*.

• **Sample Case 3 :**

The first bit is 1, so the letter lies among the last 8 letters, i.e., among *i, j, k, l, m, n, o, p*. The second bit is 0, so it lies among the first four of these, i.e., among *i, j, k, l*.

The third bit is 0, so it again lies in the first half, i.e., it's either *i* or *j*. Finally, the fourth bit is 1, so we know that the letter is *j*.

CodeChef - A Platform for Aspiring Programmers

CodeChef was created as a platform to help programmers make it big in the world of **algorithms**, **computer programming**, and **programming contests**. At CodeChef we work hard to revive the geek in you by hosting a **programming contest** at the start of the month and two smaller programming challenges at the middle and end of the month. We also aim to have training sessions and discussions related to **algorithms**, **binary search**, technicalities like **array size** and the likes. Apart from providing a platform for **programming competitions**, CodeChef also has various algorithm tutorials and forum discussions to help those who are new to the world of **computer programming**.

Practice Section - A Place to hone your 'Computer Programming Skills'

Try your hand at one of our many practice problems and submit your solution in the language of your choice. Our **programming contest** judge accepts solutions in over 55+ programming languages. Preparing for coding contests were never this much fun! Receive points, and move up through the CodeChef ranks. Use our practice section to better prepare yourself for the multiple **programming challenges** that take place through-out the month on CodeChef.

Compete - Monthly Programming Contests, Cook-off and Lunchtime

Here is where you can show off your **computer programming skills**. Take part in our 10 days long monthly coding contest and the shorter format Cook-off and Lunchtime **coding contests**. Put yourself up for recognition and win great prizes. Our **programming contests** have prizes worth up to INR 20,000 (for Indian Community), \$700 (for Global Community) and lots more CodeChef goodies up for grabs.
